

Flow Monitor

DWM

Operation

The flow monitors type DWM operate with the float measuring principle

Application

The flow monitors type DWM are used for monitoring volumeflow of liquid media

Areas of application:

– Mechanical Engineering e.g. Weldingmachinery, Laserplants

– Medicine technology

– Pharma industry

– Chemical industry

– Research and development

Features

The DWM series proves itself through reliable function and easy handling. Further characteristics of this sturdy type are:

- high reliability
- high switch accuracy
- wide switch range
- infinitely variable switchpoint adjustment through user
- EX-version to ATEX available
- high pressure resistance
- Threaded connection
Special threads on request

Installation hints

The instrument must be installed vertically in the flow circuit. The flowdirection is from bottom to top.

The flow monitor must not be used as a supporting part in a pipeconstruction!

The medium must not contain any solid particles!
We recommend the installation of strainers type SFD or SFM.

External magnetic fields influence the switch contact. Keep adequate distance to those magnetic fields (e.g. electromotors)!

The operating instruction for DWM must be observed under any circumstances!
